Monitor Employee Activities and Maintain Security in your Organization

Monitoring of employees is an all time challenge for organizations and supervisors. Un-supervised activities lead to transfer of confidential data, security breach in terms of contract and conduct, and leak outs of company information. Human supervisory measures prove efficient when number of people to monitor are small but when this number increase also increases the requirement of increased supervisory controls.

Supervisory measures works to certain extent and we tend to hear news of confidential data transfers, and leak outs of company information to competitors, employee abuse through emails within an organization, time wastage in personal internet browsing, and much more.

Requirement of tracing employee activities in an organization arise due to poor performance of employees, wasting of work hours in non-work related surfing, playing online games, visiting porn sites, and even email abuses done through office computers can affect company's image and its market presence. To prevent such happenings, computer monitoring tools have marked their importance in every big corporate culture.

Employers need to be assured that employees are not misusing company resources, wasting their time in net surfing, spending hours in cafeterias, or are involved in transfer of confidential documents. Monitoring of activities lead to increased productivity, growth and keeps away from any bad name in the market.

An organization needs a monitoring tool to keep an eye on employee activities and not to violate employee privacy and rights. An employee should understand why a monitoring tool has been implemented and employers should also see that employee personal privacy do not gets violated.

Chily Computer Monitor is a complete monitoring solution for your organization, industry, company to protect your data and keep an eye on employee activities.

Differentiated Features of Chily Computer Monitor:

Computer Surveillance Solution: Chily Computer Monitor works like computer surveillance software which monitors and displays every screen activity of the employee computer.

Monitor Computers in LAN: Chily Computer Monitor effectively monitors n number of employee computers in domain and workgroup based network. Computers in network should have complete administrative rights to get monitored. Good network cable and network speed are the initial requirements for excellent performance of Chily Computer Monitor software.

Monitors Every Activity: Monitoring of every desktop activity has been made easy with Chily Computer Monitor. Software displays every desktop activity: mouse click, websites visited, email transfers, downloads, uploads, print commands and every other activity being performed on computer desktop.

Virtual desktops, virtual keyboards are popular these days to safeguard typed keystrokes from any key logger. A key logger will not work if a user uses virtual keyboard to type words. Chily Computer Monitor helps you out in this case too. As the software displays desktop activities, words typed by using virtual keyboard can be captured easily.

Record Monitored Activities: The monitored activities which the software traces and captures are easy to save with online and offline recording options. Online recordings are instant recordings which can be actively created by the user and offline recordings are created in absenteeism of the administrator monitoring any computer.

Easy Command Execution on Monitored Computer: Chily Computer Monitor lets you execute commands on the monitored computer(s). Commands like lock, shutdown, restart, log off, start screensaver, remove wallpaper are easily executed on the monitored computer.

System Requirements:

- Supported Platforms: Windows Vista, Windows XP (with service pack 2), Windows 2003, Windows 2000
- 100 MB of free disk space: Minimum Hardware Requirements (for both server and client computers)
- For Recordings: 500 MB of free space required on both client and server computers which if not fulfilled will not create and save recordings.
- 128 MB RAM (256 recommended)
- Processor equivalent to Pentium IV Processor
- Network speed and cable should be in very good condition. If the network speed goes down or is not performing as required by the software, monitoring will either be disconnected, stopped or stick on to one screen. To avoid this situation have good network environment.
